

HYDRAULIC COMPONENTS

TOP & TILT CYLINDERS

- Cylinders are specially designed to fit your tractor
- Cylinders are available in 2", 2-1/2" and 3" bore, depending on the tractor size
- Cylinders can be purchased in any combination, top only, tilt only or both

To make box scrapers more versatile, nothing works better than being able to control the tilt and pitch of the implement. Grading jobs are more accurate because you have complete control to develop the slopes you require when landscaping, building roads, etc.

Caution: If you extend the top link cylinder to the maximum on some box scrapers and completely collapse or extend the side link cylinder, a box scraper shank could damage the tractor tire.

VALVE & BRACKET ASSEMBLY

- Valves are available in two and three spool
- Valves handle flows from 15 to 17 GPM (10-13 GPM through the ports) @ 3000 PSI
- Brackets available for most popular models: Case, New Holland, John Deere and Kubota compact tractors
- Brackets assemblies consist of rollbar clamp, adjustable arm with valve mounting and safety valve cover

The valve and valve bracket assemblies are a simple and easy to install bolt-on-kit, no drilling required. The strong, adjustable bracket also allows positioning to the customers requirements.
